days per week 6  
Days Per month 30  
weeks per month 5  
months per year 12  
bonus 5 or 6 (leap)  
entire year 365 or 366

We have six days per week, without special names. But we need some culture-neutral names for them so that people can easily refer to them  
All months have equal days, 30, no more an no less  
A full loop around the sun takes 365.242190 days, so we need to add 1 day as leap day. Earth is slowing millennia by millennia, so the calculation of leap day can be different for future humans, we just add the day to our vacation until is becomes trivial for a century-long.  
The months "Natura" and "Tectum" are bonus and no one has to work on them, but essential jobs like med and firefighters should get paid.  
They will be paid 1 full week (1/6 of monthly payment) as a gift, tax-free.
